

KIRIBATI INSTITUTE OF TECHNOLOGY

STUDYING IT HARDWARE TECHNICIAN SKILLS AT KIT

THE KIT DIFFERENCE

- This course is delivered by KIT, taught to Australian standards and is subject to on-going quality assurance checks. It builds the same skills, knowledge and attitudes as an Australian equivalent course.
- Our dedicated staff are consistently up-skilled and trained by specialised short and long term Australian advisers.
- The KIT campus provides a friendly, safe and clean environment in which to learn, with all the latest equipment for training.
- All students participate in relevant practical activities and learn work related skills to enhance their employability.
- Students also learn core employability skills, computing skills and English language so that they are confident and work ready.

COURSE DURATION

- The IT Hardware Technician Skill Set is delivered over four terms, with classes mostly in the evenings.

IT HARDWARE TECHNICIAN'S SKILL SET

This course shows prospective employers that you are able to repair desktop and laptop computers. It also teaches how to apply preventative measures and maintain computer systems efficiently and effectively.

This course is suitable for people who already have skills in using or working with computers.

WHAT YOU WILL LEARN

- Components of a personal computer
- Safety at work – how to protect people, the environment & components
- Assembly of a desktop computer
- Installing and navigating an operating system
- Preventative maintenance
- Features and characteristics of mobile devices
- Creating a computer network
- Installing and sharing a printer
- Troubleshooting computers
